

*Clever people....*

### How does Ouch! help me?

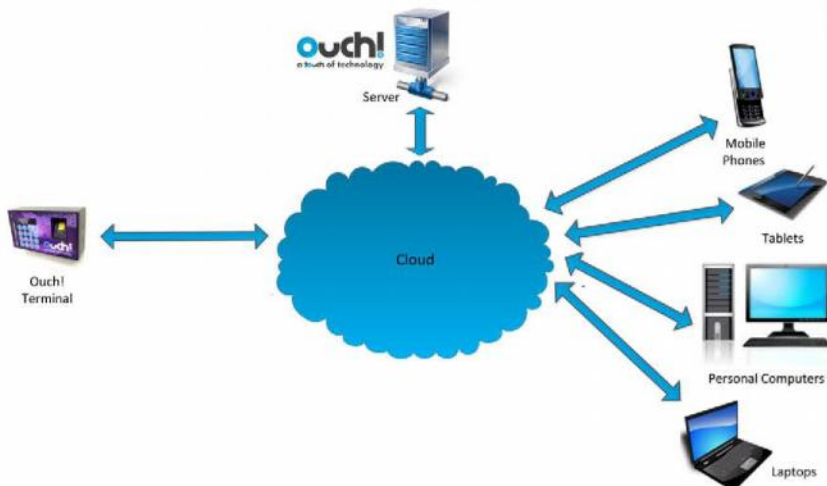

- Reduce **business expenses** by managing your time and attendance costs related to late arrivals, lost time, absenteeism, overtime and payroll generation functions.
- We've created a **web based time and attendance (clocking system)** that automates these functions in your business and saves you money (up to 16% on your payroll) from the minute you install it.
- We don't give you a piece of clunky software to manage. We give you the **reports** you need, when you need them, in a format that suits you.
- You **don't draw reports, we send them to you**. You decide whether you want daily, weekly or monthly reports on email or SMS.
- Our clocking system will do the work and put information in your hands that will allow you to **take back the control** of your workforce's time and attendance.
- We don't want you to spend time in our system, we'd like you to **spend time** in your business, **doing what you do best**.
- Over **1000 companies** successfully make use of our clocking systems and every one of them have saved money on their salary bill.
- We develop and manufacture the **software and hardware** ourselves and thus have full control over the quality and feature set of the product.
- We have over **17 years of experience** in the electronic time and attendance industry and as a result there is not much we don't know about time and attendance or clocking systems.

### How does it work?

- No need for any extra cables or computers. We issue you with a clock and only a clock.
- You get access to our Messenger software that will allow you to manage employees and reports.
- We help you understand and learn the system. We even help you enroll your first batch of employees.
- All data captured by the clock goes to a cloud-based system server platform accessible through the web.
- With our Messenger software you can access and sort all data according to your needs.
- We send you daily, weekly or monthly reports. This can be done via email or telephone.

*This nifty little machine...*

*How it all comes together...*

*Tough and strong, just like the name says!*
